

Pumpkin

3 Aluminum cans with tops removed
Scissors
Sandpaper
Measuring tape and pencil
Leaf punch
Omnistick glue
Wooden skewer
Small tea candle

Sand three aluminum cans. Wrap the measuring tape around a sanded aluminum can. Divide the can into eleven sections $\frac{3}{4}$ " apart. Cut the can creating spokes. Cut a second can in the same manner. Slightly press the spoke outward turning the cans inside out. Lap and glue the tips of the spokes together creating the pumpkin.

Cut the last can down the side and across the bottom creating an aluminum sheet. Punch out six or eight leaves using a leaf shaped paper punch. Trim the bottom of the can creating long coiled tinsel. Twist the ends of the tinsel together. Wrap the stems of the leaves around the tinsel and glue in place. Drape the wreath of leaves around the pumpkin. Place the tea candle in the base of the pumpkin.
